EDUCATION

University of South Florida <i>Bachelor of Science in Cybersecurity</i>	Tampa, FL <i>Expected 2028</i>
Hillsborough College <i>Associate of Arts in Cybersecurity Pathway GPA: 3.66/4.00 Dean's List</i>	Tampa, FL <i>Aug. 2024 – Dec. 2026</i>

CERTIFICATIONS

Microsoft Certified: Security Operations Analyst Associate (SC-200) – In Progress
CompTIA CySA+ (CS0-003) – Earned Apr. 2026
CompTIA Security+ (SY0-701) – Earned Mar. 2026

PROJECTS

Cowboy Bebop Threat Hunting Lab <i>Splunk, Sysmon, Kali Linux, Windows, MITRE ATT&CK</i> 	May 2026 – Present
Built a three-VM threat detection lab simulating four MITRE ATT&CK techniques across Initial Access, Persistence, Credential Access, and Lateral Movement, detecting each attack using Splunk and Sysmon with documented SPL queries; published full writeup at medium.com/@jwilliams.cyber	
Malware Analysis Lab <i>PEStudio, Process Monitor, Wireshark, MITRE ATT&CK</i> 	June 2026
Static and dynamic analysis of a Jigsaw ransomware sample, extracted 7,399 strings including hardcoded Bitcoin address and ransom note via PEStudio (entropy 7.356, 56/72 VirusTotal detections); detonated on isolated Windows 11 VM, captured persistence artifacts and 3.6M Process Monitor events; mapped 15+ MITRE ATT&CK techniques across Execution, Persistence, Defense Evasion, Discovery, and Impact	
24-Hour AWS Honeypot Lab <i>T-Pot, AWS EC2, Kibana, Elasticsearch, Suricata</i> 	Apr. 2026
Deployed T-Pot 24.04.1 on AWS EC2 and captured 63 attacks from 5 unique source IPs within 24 hours, detecting NMAP reconnaissance and SSH brute force attempts and mapping attacker TTPs to 5 MITRE ATT&CK techniques using Kibana and Suricata	
Azure VM Vulnerability Management <i>Azure, Nessus, PowerShell, GitHub Actions</i> 	Mar. 2026
Deployed a Windows VM in Azure, ran Tenable Nessus scans to identify vulnerabilities, remediated using PowerShell (PSWindowsUpdate), and built a GitHub Actions CI/CD pipeline to automate patch execution in a repeatable scan-patch-validate workflow	
Wireshark Traffic Analysis Automation <i>Wireshark, Python, Pandas, Suricata</i> 	Mar. 2026
Analyzed 24,834 packets across TCP, UDP, QUIC, and TLSv1.3 and automated triage using Python/Pandas; extended to real-world malware PCAP analysis of a Koi Stealer infection (Malware-Traffic-Analysis.net), identifying C2 beaconing to 79.124.78.197 and confirming credential exfiltration via Suricata alerts and HTTP stream analysis; mapped T1071 and T1041	

EXPERIENCE

Guest Arrival Ambassador <i>Busch Gardens Tampa Bay</i>	May 2024 – Present <i>Tampa, FL</i>
- Troubleshoot ticketing and access systems to restore service and maintain uptime in a high-traffic environment serving hundreds of daily guests, resolving access issues and escalating system failures to the appropriate team - Coordinated manual check-in procedures during a facility-wide power outage affecting ticketing infrastructure, maintaining guest flow until full system restoration	

TECHNICAL SKILLS

Security Tools: Splunk, Sysmon, Wireshark, Tenable Nessus, PEStudio, MalwareBazaar
Languages: Python, SQL, PowerShell, Bash
Cloud & Infrastructure: Azure, AWS EC2, Git, VMware
Systems & Scripting: Linux CLI, VirtualBox, Kali Linux
Frameworks & Concepts: MITRE ATT&CK, SIEM, Threat Detection, Vulnerability Management, Threat Hunting, Malware Analysis

ACTIVITIES

Member <i>HCC Cyberhawks Cybersecurity Club</i>	Aug. 2024 – Present <i>Tampa, FL</i>
Competed in National Cyber League (NCL) CTF challenges covering cryptography, log analysis, open-source intelligence, and network forensics; attended BSides Tampa	

AWARDS

Microsoft Cybersecurity Talent Fund | Last Mile Education Fund – Spring 2026
